

USB CHARGING WALL PLATE

Instruction Manual

**1-YEAR
WARRANTY**
MADE IN CHINA

Introduction

Our USB Charging Wall Plates are the easiest way to add USB Fast-Charging capability to any standard indoor duplex or décor electrical outlets. You simply remove the existing wall plate and replace it with the USB wall plate using the same screws.

Safety Preparations

CAUTION! It is critical to confirm that power has been shut off from the designated outlet before starting the installation. Replacement of electrical wall plates cannot be done safely unless power has been disconnected at the breaker panel or fuse panel.

Locate the electrical cutoff point. Turn off the breaker switch or remove the fuse. Test the outlet with a working lamp or voltage meter to ensure power has been disconnected.

Cleaning

Clean USB Charging Wall Plate with a soft, dry cloth. Ensure that no moisture gets inside the USB ports or outlets.

Installation

Please follow these directions carefully to safely install this product. Tools Needed: **Flat Head Screwdriver**

Step 1: Unscrew the existing wall plate

Step 2: Only Duplex Style

Remove only the bottom screw from the socket receptacle

Step 3: Align USB Charging Wall Plate with socket receptacle, and push-in the USB Charging Wallplate

Ensure the 2 contacts on the back of the wall plate make contact with the metal screws on the sides of the electrical outlet

Step 4: Décor Style

Secure USB Charging Wall Plate with two screws
Only Duplex Style

1. Install the short white screw provided in the center
2. Install the long white screw through the bottom hole

Turn on power to the outlet after confirming that the installation is correct.

If you have any questions or concerns which are not addressed in this document, please contact Quest Technology International. Do not attempt to troubleshoot any electrical outlet without proper training.
